The invention relates to zsig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones.

The sequences of the invention and their complements are used as treatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic against contractility in the presence of ZSIG31 in samples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of digestive enzymes and hormones, and/or hormones in the panceas. zsig33-like DNA is used in gene therapy and zsig33-like peptide, zsig33-linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nutrient

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         å
                                                                caignal linker, zaignal beta, zaignal gamma, zaignal dalta and zaignal linker, zaignal beta, zaignal gamma, zaignal dalta and zaignal linker, zaignal beta, zaignama, zaignal dalta and zaignal linker, zaignal beta, zaignama, zaignal dalta and zaignal linker peptides and nucleic acid molecules encoding such zaignal linke peptides. zaignal peptides activate the immunocompromised in boosting immunocompromised patients such as human immunodefictency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and consistent in receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic preparations containing glucose and as adsorption chhancers for oral drugs which require fast nutrient action and to chance for oral drugs which require fast nutrient action and to attimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation of tissues associated for the expansion, differentiation of tissues associated with contractile tissues or to suppress or enhance contractility in vivo and to treat contractility in discrete with gastrointestinal contractility, secretion of diseases, zaside peptides and acids, secretion of hormone and acids, secretion of hormone as in the pancreas and/or branch.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                           gastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; zsłg33-like peptide; ZS33LP; immunity; developmental process; infection; human immunodeficiency virus; vaccine; antihypoglycaemic; adsorption enhancer; gastrointestinal disease; growth related disease; inflammation; gene therapy; growth regulation; blood vessel formation; HIV; zsłg33-linker peptide.

rice inversion paperides and nucleic acid molecules encoding such zaig33-tinker, zaig33-epsilon peptides and nucleic acid molecules encoding such zaig33-epsilon peptides and nucleic acid molecules encoding such zaig33-tinker peptides acitivate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodefictency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and captient receptors involved in growth regulation in the liver; blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic preparations containing glucose and as adsorption chhancers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation, growth factor and cortinal system, brain and central nervous system. These molecules are useful for treating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth related diseases. ZS31rp peptides, nucleic acids and/or antibodles are useful for treating discretes and and/or brains.

Contractility in vivo and contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones in the pancreas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to zaig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention and their complements are used as treatment of diseases associated with inappropriate 2siG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify and antigonists are used to down regulate expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 in samples (e.g. by enzyme linked immunosorbent assays (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of digestive enzymes and hormones, and/or secretion of digestive enzymes and hormones, and/or secretion of digestive enzymes and azig33-like poptide. Zsig33-like peptide.
                                                                                                                                                                                                                                                                                                                                                                    251G33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; zsig33-like peptide; ZS33LP; immunity; developmental process; infection; human immunodeficiency virus; vaccine; antihypoglycaemic; adsorption enhancer; gastrointestinal disease; growth related disease; inflammation; gene therapy; growth regulation; blood vessel formation; HIV; zsig33-linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghreal in monologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth commone deficiency. The compounds of the invention are safe with commone deficiency. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zsig33; gastric motility; gastrointestinal inflammation; reflux disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying a cancer cell or tissue for treating prostate, ovarian, breast cancer, or benign prostatic hyperplasia, by detecting the expression of a ghrelin, an exon-3 deleted preproghrelin and/or a GHS-R 1b proteins or nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for identifying a cancer cell or tissue of the reproductive system by detecting expression of a ghrelin, and exon-3 deleted preproghelin and/or a GHS-H lb proteins or nucleic acids. The antibodies, exon 3-deleted form of preproghrelin and antagonists are useful for treating cancer of the reproductive system such as prostate, ovarian, breast, cervical or uterine cancer, choricorarchioma or benign prostatic hyperplasia. The present sequence is human exon 3-deleted ghrelin protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                     The present sequence represents a protein designated Zaig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or alielite variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal cell contractility, secretion of digestive conzymes, gastrointestinal motility, recruitment of digestive ansymes, gastrointestinal inflammation, reflux disease and nutrient absorption regulation Zaig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety cort treat obesity and other metabolic disorders where neurological elebation of the metabolic disorders where neurological feedback modulates nutritional absorption. They are useful to identify zigi3 agonists, antagonists and ligands and to produce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; signal peptide-containing protein; HSPP; diagnosis; cancer; inflammation; cardiovascular disease; anticancer; anti-inflammatory; antimicrobial; nootropic; neuroprotective; cardiovascular; hepatotropic; antisthmatic; gene therapy; cell proliferation; neurological disorder; reproductive disorder; developmental disorder; arteriosclerosis; cirrhosis; psoriasis; acquired immune deficiency syndrome; anemia; asthma; Crohn's disease; infection; Alzheimer's disease; schbrenia; Parkinson's disease; Huntington's diseases; ovulatory defect;

AAZ98109 to AAZ98242 encode AAY87224 to AAY87357 which represent the human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPBs have anticancer, anti-inflammatory, antimarcobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiaethmatic activities, and can be used in game therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Such diseases include cell proliferation (HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (Including cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosclerosis, cathma, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, microbial or other infections, congestive or ischaemic heart disease, Alzhaimer's, Parkinson's or Huntington's uncleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antisense, triplex-forming or ribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping, HSPP are also used to raise specific antibodies (Ab) and to screen for genetic variations, and for chromosomal mapping, HSPP are also used to raise specific acids can be used for chromosomal mapping, HSPP are also used to raise specific acids can be used for chromosomal mapping, HSPP are also used to raise specific for admits and the screen for genetic variations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antagonists (potential therapeutic agents). Ab are used to diagnose, or monitor, HSPP-related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic;

skeletal dysplasis, immune suppression, obesity, growth retardation, protein catabolic responses after surgery, cachexia, protein loss, dwarfism, wound healing and ovulation induction, treating a mammal having a metabolic disorder requiring neurological feedback, such as satiety regulation, glucose absorption and metabolism and neuropathy-associated gastrointestinal disorders, and stimulating glucose-induced insulin release in a mammal. The present sequence represents the human zsig33 polypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of forming a reversible peptide-
receptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsig33 peptide (comprising residues 24-7)
of AAB62649), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
transduction in a dell expressing a receptor. It is also useful for
modulating secretion of hormones, neural development and/or utilization,
gastric contractility, nutrient uptake, secretion of disestive and
pancreatic enzymes and hormones, secretion of insulinilke growth factor-
1, secretion of non-zsig33 proteins. It is useful for modulating growth
hormone secretion in a mammal having a disease associated with abnormal
levels of growth hormone, such as osteoporosis, bone repair, bone
remodeling, low osteoblast levels, cartilage repair and remodeling,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, manunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinianian activity, chemoctactic/chemokinetic activity, haemoctactic and therapy, drug screening, as assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion conforming in calls. The peptides are ghreal in monologues and are concentration in cells. The peptides are ghreal in monologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a giventh hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                           Growth hormone secretagogue; GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hosoda H, Matsuo H, Minamitake Y;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the small intestine and pancreas. A novel peptide fragment of zsig33 termed SGIP (see AAB20100), is claimed. SGIP is a ligand for growth hormone secretagogue receptor, and is therefore useful for modulating secretion of growth hormone and insullin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jejunum issue,
                                                                                              SGIP; zsig33; anorectic; antidiabetic; somatotropin; somatomedin-C; nutritional absorption modulator; growth hormone secretagogue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel variants of SGIP peptides for modulating contractility in duodenum or jejunum tissue, pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion or modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    modulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 117;
                                                                                                                                                                                                                                                                                                                                                              24..34
/label- SGIP_peptide
/note= "this peptide is claimed in Claim 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bishop PD;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 121; DB 22;

The specification describes a short gastroinestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by expressing inactive proteins or to supplement the patients own production of SGIP SGIP may also be used as an antigon in the production of antibodies against SGIP and in assays to identify modulators of SGIP expression and activity. The anti-SGIP antibodies, agonists and antibodies may also be used to regulate expression and activity. The anti-SGIP antibodies against some the presence of SGIP in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                              New Short Gastrointestinal Peptide, which has homology to motilin, assetul for preventing, diagnosing and treating gastrointestinal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Rousselle J., Lacroix D., Dubreuil P.;
Submitted (MAR-2001) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type I (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
--- SUBCELLULAR LOCATION: Secreted (By similarity).
                                                                                                                                                                                                                                                                                   Name-1; Synonyma-Ghrelin;

Thormone secretagogue receptor.";

Trends Endocrinol. Metab. 12:118-122(2001).

TRENDATIVE INCOMINON: Secreted.

TRENDATIVE PRODUCTS:

Event-Alternative Splicing; Named isoforms=2;

Name=1; Synonyms-detalin;

TSOId=09E0X0-1; Sequence-Displayed;

Name=1; Synonyms-del-Ginlid ghrelin;

TSOIG=09E0X0-2; Sequence-VSP 003246;

TSOIG=09E0X0-2; Sequence-VSP 003246;

TISSUE SPECIFICITY: Mainly expressed in the gastrointestinal tract

With higher levels in the stomach, medium levels in the duodenum,

1 sylonym and colon. Low expression in the testis and brain.

THOM On-octanoylation is assential for activity (By similarity).

THARITY: BELONGS TO THE MOTILIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Arakawa T., Hara A., Shibata K., Yoshino M., Itoh M., Ishii Y.,

secretase regulates transcription.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cellular G-protein signaling pathways. Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I. FUNCTION: The gamma-CTF peptide, C30, is a potent enhancer of neuronal apoptosis (By similarity). SuBUNIT: Binds, via its C-terminal, to the PID domain of several cytoplasmic proteins, including APBB and APBA family members, MAPKBIP1 and Dabl (By similarity). Binding to Dabl inhibits its series phosphorylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-21408156; PubMed-11517249; Matsuda S., Yasukawa T., Homma Y., Ito Y., Niikura T., Hiraki T., Hirai S., Ohno S., Kita Y., Kawasumi M., Kouyama K., Yamamoto T., Kyriakis J.M., Nishimoto I.; "C-jun N-terminal kinase (JNK)-interacting protein-lb/islet-brain-1 Scaffolds Alzheimer's amyloid precursor protein with JNK."; Neurosci. 21:6597-6607(2001).

terminal to the NPXY motif are often required for complete interaction. The NPXX site is also involved in clatherin-mediated
                                                                                                PTM: O-glycosylated.
MISCELLANEOUS: Binds zinc and copper in the extracellular domain.
Ainc-binding increases heparin binding. No Cu(II) reducing activity with copper-binding.
SIMILARITY: BELONGS TO THE APP FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SIMILARITY).

                                                                                                                                                                                                                      Tucker J.E., Winkfein R.J., Cooper C.B., Schnetkamp P.P.M.;

"CDNA cloning of the human retinal rod Na-Ca + K exchanger:

comparison with a revised bovine sequence.";

IL Invest. Ophthalmol. Vis. Sci. 33:435-440(1998).

-1- FUNCTION: Critical component of the visual transduction cascade,

controlling the calculum concentration of outer segments during

light and darkness. Light causes a rapid lowering of cytosolic

free calculum in the outer segment of both retinal rod and cone

photoreceptors and the light induced lowering of calculum is caused

by extrusion via this protein which plays a key role in the

process of light adaptation. Transports one Ca(2+) and one K(+) in

exchange for four Na(+) (By similarity).

-1- SUBCELDULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.                                                                                                                                                                                                             DNA Res. 7:131-135(2000).

-I- FUNCTION: COULD ACT LATE IN THE SPLICING OF PRE-MRNA AND MEDIATE
THE RELEASE OF THE SPLICED MRNA FROM SPLICEOSOMES (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: Nuclear (Probable).

-I- SIMILARITY: BELONGS TO THE DEAD BOX HELICASE FAMILY. DEAH
SUBFAMILY. DOXA(FRP22 ORTHOLOG.

-I- SIMILARITY: Contains 15 morth domain.

-I- CAUTION: Ref.1 sequences differ from that shown due to a
frameshift in position 57.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
